

Coding Club Week 5

I am EV3 a
programmable robot
built from Legos! I
helped in learning
about debugging and
events!

Not bugs like me!
Bugs are mistakes in a
computer program!
Mistakes help us
learn!

Sometimes bugs in the code can
be frustrating. When this
happens you can take a little
break, get some fresh air or ask
for help. What else helps you
calm down so you can find the
bug and move on with the code?

Events are what starts a
code! Such as clicking on the
green flag, tapping a
character, pressing the
spacebar, or clapping our
hands to make Dot's lights
turn on.

when  clicked

when program starts
